Professional Summary

Full-stack Engineer with 2+ years delivering production web and AI systems. Built end-to-end solutions across backend, frontend, fullstack, ML pipelines, data, improving efficiency and reliability for clients in healthcare, travel, agriculture, and consumer sectors.

Experience

- Lead Backend Engineer (Freelance)**, MITS SARL (*Mar 2026–May 2026*) – Engineered a conversational WhatsApp module for a B2B travel platform. LLM-driven, OTP auth, booking approval with concurrency control. Integrated into existing AWS backend (SQS, DynamoDB, Redis, ECS Fargate) without modifying upstream services. Cut booking request time by over 90%.
- Research Engineer (Full-Stack & Applied AI)**, JIANTS (*Jan 2025–Jan 2026*) – built AI-enabled internal platforms reducing prototype-to-deployment time by 30%, experimented with deep learning models for assistive applications, contributed to LINA winning 1st Prize at Huawei ICT Competition globally, helped improve autonomy and navigation by 56%.
- Software Engineer (Full-Stack & AI)**, TGNix (*Mar 2024–Dec 2024*) – delivered client-facing web/AI solutions end-to-end, built scalable DRF backend APIs, integrated ML models for automated inference, deployed Dockerized apps improving release reliability.
- Junior AI Backend Engineer (Intern)**, AITECAF (*Jun 2023–Nov 2023*) – built REST APIs centralizing AI/non-AI services, developed LangChain chatbot reducing repetitive queries, trained YOLO cassava disease model enabling sub-5ms identification.

Selected Projects

- VERO** (*Personal Project, Ongoing*) full-stack AI research workspace with project-scoped ingestion, hybrid retrieval, grounded chat with citations, and persistent sessions.
- PlumVision** (*JCIA Hackathon Winner, 2025*) real-time plum classifier (98% accuracy, 3MB model, <12ms inference) for instant quality control.
- EatWise** (*JCIA Most Innovative AI Prototype, Ongoing*) mobile AI assistant improving nutrition via food recognition, personalized meal plans, and hundreds of local recipes.
- Spoof Detector** (*Personal Project*) face spoofing detection model exposed via Flask API for secure authentication pipelines.
- Multi-Task Transfer Learning for Malaria Diagnosis** (*MSc Thesis, 2025*) multi-task model improving diagnostic stability and performance over single-task baselines, deployed via FastAPI.

Awards and Recognition

- 2nd Place Orange Digital Centre Champions Africa 2025**, algorithmic coding contest across Africa.
- JCIA Hackathon 2025 Winner**, *PlumVision* – 98% accuracy, 3MB model, <12ms inference, instant quality control.
- Most Innovative AI Prototype JCIA AI Solutions Track Winner**, *EatWise* – personalized nutrition assistant.
- 1st Prize Huawei ICT Competition**, *LINA* – AI system improving navigation, and autonomy for blind users by 56%.

Academic Qualifications

- MSc in Engineering** (*2023–2025*), National Higher Polytechnic School of Douala – Data Science & AI, thesis: multi-task transfer learning for malaria.
- BSc in Engineering** (*2020–2023*), National Higher Polytechnic School of Douala – Computer Science and foundations of DS/AI.

Research & Publications

- Multi-Task Transfer Learning and Application to Malaria Detection** – MSc Thesis, 2025, github.com/GwadeSteve/MTTL-Research-Malaria.

Skills & Interests

Technical: Python, JavaScript, SQL, React, React Native, Tailwind, DRF, FastAPI, Flask, Node.js, PostgreSQL, Redis, Supabase, PyTorch, TensorFlow, scikit-learn, LangChain, RAG, Docker, CI/CD, GitHub Actions, AWS (EC2, Fargate, S3, SageMaker), Linux
Professional: Problem solving, Autonomous, time management, critical thinking, end-to-end product execution, ownership, stakeholder communication, efficient delivery.
Interests: Reading, Gaming, Basketball, Coffee, Open-source.
